CURRICULUM VITAE

PERSONAL DATA

Name: **Mikhail Ivanenko**

Birthday: **the 22^d of December of 1983**
Birth place: **Russia, Omsk**
Location: **Russia, Kaliningrad, GMT+2**

Position: Ruby developer

Email: mich83@yandex.ru

Languages: Russian native, English fluent (C1), Spanish fluent, German basic

Key skills: Ruby, Java, C#, ERP, CRM, Agile development, Jira, Mercurial.

EDUCATION

2000-2008 Systems and network engineer in Omsk State University, Russia.

CERTIFICATION

1. Oracle certified associate (16/12/2014)

RUBY EXPERIENCE 3 years, 2013-2016

1. Projects and task tracker based on gamefication concept (AngularJS + RoR 5)

   The application allows to convert business routines into interesting playing activities. Now employees don't participate in dull projects and filling some documents, but they are fighting for a power in the world. The application represents company's projects and activities as a real-time strategy game. Going into the technical details I can say that application uses RoR, AngularJS and PostgreSQL. We selected RoR 5 to implement some edge features like, for example, ActionCable. I am responsible for a back-end development, so I work on data organization, inner calculations and API development.

2. Bus tickets corporate and on-line selling platform (RoR 3.2)

   This job is connected with development of a bunch of applications which are united in the bus ticket selling platform. The core application implements maintaining of all needed information like bus stations, routes, schedules and allows collecting purchase data and building of reports. This application provides 2 types of RESTful API: one for a point of sales desktop application written in Java and another one for a e-commerce application written also in RoR. Combination of these applications allows us to serve almost all existing processes in bus company: from travel planning and selling tickets to creating reports and simple commissions calculations.

3. Sales point management system

   a. Back-end - Coffee Script + Ruby on Rails
   b. Front-end – Ruby + wxWidgets

   Simple sales point management system with intent to manage inventory.

4. Law documents management system (Ruby on Rails + MongoDB)

5. Digital documents management portal– https://mifactura.ec

   The portal allows users to store their digitally signed documents and create some basic reports. The main goal was to build a user-friendly interface for these operations, because at the moment of creation of this portal the government did not provide such options. The only existing possibility was to exchange with XML files which was not very convenient.

6. On-line selling platform with multilevel marketing support https://miracompra.com.ec

   Simple e-commerce application based on SpreeCommerce. The main goal was to implement some multilevel marketing features like customers tree, achievements and commissions distribution.

JAVA EXPERIENCE 3 years, 2012-2013, 2015-2016

1. LatamTicket point of sales application
2. Tool for digital document signing
3. Android vending machine client
4. Android invoice collection application for delivery company

C# EXPERIENCE 1year, 2011-2012

1. Windows Mobile invoice collection application for delivery company

ERP&CRM EXPERIENCE since 2005

1. Logistic company ERP implementation: generic ERP + delivery planning module (Russian)
2. Generic accounting system for Ecuador: https://lanube.ec/demo
3. Generic POS solution: https://lanube.ec/PDV
4. Dental clinic CRM

DELPHI EXPERIENCE, 5 years, 1997-2001, 2004-05

1. Agricultural math model – 1997-99
2. Road surface simulation – 2000
3. HR agency CRM – 2000-2001
